Size **594 x 841 mm**
Number LED's **132**
Light capacity **2000 - 2400 W**
Profile thickness **32 mm**

Comes with build-in on/off switch.

Single sided fabric material frame, equipped with LED lighting. Thanks to the special treated acrylic plate the box will give you a homogenous lighting.

The principle of this presentation system is based upon the Maxi Framu. You need to stitch your own fabric material, no thicker than 0.5 mm, on the back side together with the supplied silicone strip. We advise you to let a professional company for example a curtain studio do this for you. Please keep in mind that the supplied Aull strip is attached alongside the silicone strip. With this pull strip you can later on remove the fabric material from the frame. Next you push the fabric material into the frame profile and pull it tight together. Thanks to the solid profile structure your fabric material will remain tight in the frame at all times.

Thanks to the LED light box and the fabric material, this product will present itself in an elegant manner in your showroom.
