Modular alphabet with LED

The sockets to be used to collocate the letters are specially designed as Silver plated brass. Therefore it is resistant to corrosion and the relevant problems. The most important feature of modular letters is that LEDs' high lumen output with their 90.000 hrs lifetime.

Injection moulded letters are UV filtered and their colour will not fade away in case of direct sunlight exposure. Their printed circuit boards are double sided and epoxide.

The modular letters are impact modified and riveting method is used to prevent copper strips from being broken off. Products are for indoor use.
